[TIRE BALANCING BEADS](#)

Wheel weights have been around for many years, but are no longer the only solution for trucks, commercial vehicles and motorcycles. We want you to get the highest possible tire mileage by using our products.

The way we do this is by offering a Dynamic Balancing Solution, a high-density ceramic bead that, when easily installed, continuously balances your tires as you drive. The amount of material will distribute itself in weight and position dependent on the balance requirements of the individual tire.

The result is a smooth, vibration-free ride, derived from our balancing media that is always repositioning itself as the tire wears. If you own a motorcycle (or even a pickup truck, commercial truck, motorhome, RV, tractor trailer, or similar vehicle), and want to get rid of those wheel vibration and tire cupping problems, then you need to move up to Dyna Beads®!

YOU WILL BE AMAZED AT THE RIDE QUALITY...
IT WILL BE AS SMOOTH AS GLASS!!!

APPLICATION GUIDE FOR MOTORCYCLES
(Contact me for Car & Truck Applications - I can cover them all)
(Or other Cycle Applications not listed)

Motorcycle applications are easy for all road bikes

| | |
|---|------|
| 80 - 120 mm tire width front or rear ----- | 1 oz |
| 130 mm - 250 mm width front or rear----- | 2 oz |
| 260 mm - 300mm tire width rear tires----- | 3 oz |
| VTX owners with Goodyear Car tire (rear)----- | 3 oz |

From a Goldwing down to a Rebal----- 2 oz in front tires, 2 oz in rear
This covers most all Japanese
cruisers and sport bikes

| | |
|--|------|
| 10" diameter wheels (scooters)----- | 1 oz |
| 12" & Up diameter wheels (scooters)----- | 2 oz |

Purchasing the installation kit is pretty much a must unless
you are real good at pouring these small beads in
through your valve stem or good with
TWEEZERS!
